Lawn Grass Seed Mixtures

PRICE'S "SPECIAL" FINE MIXED LAWN GRASS SEED

Our mixture absolutely can be relied on as being made up of the finest quality of grass seeds obtainable, free from weed seeds, and chaff, and is of the very best and highest germinating qualities. It is a special mixture of grasses that do best in our soils. It makes a smooth, green, velvety lawn with a thick bottom, free from clumps. Only the very best fine-leaved and deep-rooted varieties of the most suitable grasses for making an even, thick mass of sod are used in this mixture. Sure to produce the best results under average conditions of soil and climate. A quantity of white clover is included. Lb. 60c., 2 lbs. \$1.15, 5 lbs. \$2.50, 10 lbs. \$4.25, 20 lbs. \$8.50, 100 lbs. \$35.00

There is nothing so much admired or desired as a thick green, velvety lawn, and no property is complete or attractive without it. By sowing our seed and following the general directions you will be successful in attaining your ideal in a lawn.

We cannot emphasize too strongly the regular application of high grade fertilizers. The seed mixture should contain the right varieties to promote a quick growth to retard the growth of weeds already in the soil, followed by the slower growing kinds, making a gradual transformation into a beautiful lawn. Study the analysis and avoid mixtures predominating in Timothy if a permanent lawn is to be expected. The seeds should be good to begin with, then thoroughly re-cleaned. They should be heavy and of good germination and vitality, then mixed in the correct proportion, without the addition of any other matter to make bulk, and purchased by the pound.

PRICE'S "CAPITOL PARK" GRASS SEED

This mixture is composed of fine re-cleaned grasses and white clover, carefully proportioned so that they succeed one another throughout the Summer; where low cost and quality is important we have prepared this mixture to meet your budget. Lb. 40c., 2 lbs. 75c., 5 lbs. \$1.75, 10 lbs. \$3.25, 20 lbs. (bu.) \$6.50, 100 lbs. \$30.00

PRICE'S MIXTURE OF GRASSES FOR SHADY PLACES

While it is impossible to maintain a permanent lawn in certain shady locations, such as under soft maple trees, we have combined in this mixture certain grasses that are more resistant to these harsh conditions. We recommend this mixture to be especially prepared for shady locations. Sow 1 lb. to 100 square feet (10x10 feet). Lb. 60c., 2 lbs. \$1.15, 5 lbs. \$2.50, 10 lbs. \$4.25, 20 lbs. \$8.50

PRICE'S SPECIAL BENT FORMULA

A combination of bent grasses and other fine grasses. It does not contain clover. A lawn seeded with this mixture will be like a putting green. Lb. 75c., 5 lbs. \$3.50

Fancy White Dutch Clover. A small creeping perennial variety valuable for lawns. It grows rapidly, forming a close herbage and remains green throughout the season. It does well on all soils, especially where lime is present. Lb. \$1.25

Sea Side Bent (Certified). Being offered under various names. Was first recognized in Oregon. A very desirable variety, being a vigorous creeper of rapid growth, forms a compact sward and suitable for putting greens. Lb. \$1.65, 10 lbs. \$15.50

We guarantee our mixtures to equal or exceed the best and invite analysis test. One pound of our mixture is sufficient to sow 200 square feet. The essentials of a good lawn are: well drained, rich soil, thorough working of the ground to make it fine, mellow and smooth, then roll and fill in any depressions. Rake lightly and sow the seed by broadcasting one-half of the seed one way and the balance at right angles to insure even distribution and then roll again. All lawns should be rolled thoroughly every Spring. Early Spring or Fall is the best time to seed so that the young plants will not be exposed to dry cold weather or hot Summer sunshine until the roots are well established. To renovate old lawns, rake thoroughly and sow one-half the amount of seed required for a new lawn and roll. Get seed in just before a rain if possible. Where clay soil becomes too hard or where soil is composed of sand and gravel, Peat Moss may be worked in to excellent advantage to provide humus.

Fancy Kentucky Blue Grass. An ideal lawn grass, slightly creeping in habit, fine texture and permanent, improves each year. Prefers retentive, strong soils with moisture. Lb. 50c., 3 lbs. \$1.40, 5 lbs. \$2.25, 10 lbs. \$4.30, 25 lbs. or more, 40c. per lb.

Fancy Red Top. A fine perennial grass with slightly creeping habits of growth, which adapts itself very well to all soil and conditions. Stands hot weather and hard usage. Fills in well with Blue Grass. Lb. 40c., 3 lbs. \$1.15, 5 lbs. \$1.85, 10 lbs. \$3.60, 25 lbs. or more, 35c. per lb.

Chewing Fescue. A New Zealand grown strain of red or creeping fescue. A creeping rooted grass resisting extreme drought and especially adapted for forming close and lasting turf in shady places. Valuable for exposed hillsides and golf courses. Lb. 80c., 3 lbs. \$2.35, 5 lbs. \$3.75, 10 lbs. \$7.50, 25 lbs. or more, 70c. per lb.

Timothy. Extra re-cleaned and high germinating. Free from weeds. Lb. 20c., 10 lbs. \$1.50

The supply of garden and flower seeds for 1943 has been reduced by weather and war conditions. In normal times considerable seed has been produced in Europe for export to United States, Canada, Australia, South America and Africa. With this supply almost entirely cut off, these countries have become buyers in the United States.

Under these conditions, it would seem wise to purchase your seeds early.

For 112 years, through times of depression and prosperity, the confidence of our customers has enabled us to maintain the standards whereby **PRICE'S SEEDS** have stood the Test of Time.

GROW MORE VEGETABLES

The great need for increased vegetable production presents a real problem. In the national emergency both the defense effort and induction into the armed services have depleted farm help. Each gardener must find the way to grow the largest crop with the help available.

Your job is to grow the very best crops. Our job—never ending—is to supply only those seeds which will make your job most successful.

Asparagus, Mary Washington

Asparagus Seed

Sow seed in early Spring in rows 1½ to 2 feet apart, spacing the seed 1 inch apart in the row, and firmly cover with 1 inch of fine soil. Keep free from weeds at all times. A packet will produce about 200 roots, *cz.*, 750; 4 to 5 lbs. to the acre.

MARY WASHINGTON. This variety has proven to be highly rust resistant, hardy and productive. The shoots are long, straight, thick and heavy, dark green the entire length, except tinted darker at the tips. Introduced by Prof. Norton of the U. S. Dept. of Agriculture. Our seed is the true strain and will produce the finest large stalks.
Pkt. 10c., oz. 15c., ¼ lb. 40c., lb. \$1.25,
10 lbs. \$11.50

Palmetto. Of very large size, even and regular in growth and appearance. A very early sort immensely productive and of the best quality.
Pkt. 10c., oz. 15c., ¼ lb. 35c., lb. \$1.00,
10 lbs. \$9.00

Asparagus Roots

Set out in April—Fresh dug—Not cold storage roots

Dig or plow out a trench 15 to 18 inches deep, put in plenty of well-rotted manure, covering it with a few inches of soil, then set the roots 1½ to 2 feet apart and cover with 4 inches of soil. In the Fall, cut off and burn the top growth, plow or throw down the earth and give a good application of stable manure. Early in the Spring fork this in and apply ground animal bone. If White Asparagus is wanted draw earth around the stalks as they grow. Do not continue cutting too long, as this exhausts the plants. 100 roots plant about 15x50 feet, 5,000 to 7,000 will plant an acre.

Washington Rust-Resistant Roots. 2-yr.-old strong plants that will make you a profitable crop second year. *Postpaid*, 100 roots \$2.00, 250, \$3.50
Not prepaid, 500 roots \$6.50, 1000 \$12.00

BROCCOLI

Culture same as for Cauliflower. Italian Broccoli much resembles a green-headed Cauliflower. The true Italian Broccoli produces one head on its main stalk. When this has been cut smaller heads appear, which are also marketed. ¼ oz. of seed will produce 2000 plants.

Italian Green Sprouting (Calabrese). This variety produces a large head, like Cauliflower, consisting of a compact cluster of bluish green flowers. When the central head is removed, the plant produces many branches, each bearing small heads. These are cut with 3 or 4 in. of the branch attached and tied in bunches for market. The stems as well as the flower heads are cooked and served as Cauliflower.

Pkt. 10c., oz. 60c., ¼ lb. \$1.75, lb. \$6.00

Di Rapa. For Spring sowing. Forms a compact top growth and bears a yellow blossom before going to seed. Known also as Caledonia Turnip, this variety is relished for its Turnip like leaves and small flowers heads which are eaten as greens.

Pkt. 10c., oz. 25c., ¼ lb. 60c., lb. \$1.75

Broccoli, Italian Green Sprouting

Twist-Ems for Asparagus and Broccoli bunching, ¼ in. wide, 16 in. long, made of paper and wire, for quick bunching. 1000 for \$2.15

BRUSSELS SPROUTS

The most delicately flavored vegetable of the entire Cabbage family. Plants grow medium tall and produce an abundance of large, solid, dark green, tightly folded "sprouts" or little Cabbage-like heads along the stem. Grow in moderately rich soil to avoid an excess of leaves. Sow seed in May in the open ground. Transplant in rows 3 feet apart and 18 inches apart in the row. When the "sprouts" begin to form at the base of the stalk, break off the lower leaves to give them more room for growth. A packet of seed produces about 300 plants,

1 oz., 3000 plants; 4 to 6 ozs. to plant an acre.

Long Island Strain (A Special Dwarf Selection). This is a fine strain of Sprouts, grown extensively for the New York market, where they bring a good price, especially during the Winter. The plants produce a large crop.

Pkt. 10c., oz. 75c., ¼ lb. \$2.35, lb. \$8.00

YELLOW-POD BUSH BEANS

Plant seed when all danger of frost is past and the soil is quite warm, in rows 18 to 30 inches apart for hand cultivation, or 2 1/2 to 3 feet apart for field culture. Space the seed 2 to 3 inches apart in the row and cover with 1 to 2 inches of soil. Give frequent and shallow cultivation until blossoms appear. A packet will plant about 25 feet of row; 1 lb., 100 feet; 60 lbs. to an acre. You can make your Bean crop most effective if you plant seed at intervals of two weeks until about 10 weeks before the first frost. In that way you can have plants in full production constantly, providing a steady supply for both table and canning purposes. Remember, Beans have the best flavor when served or canned soon after picking.

BUSH LIMA BEANS

The Bush Lima is more easily grown than the tall, and is earlier and more economical of space but the Pole Limas yield better.

Lima Beans require even more heat than other Beans. They should not be planted until the ground is thoroughly warmed. Bush Limas should be sown on good garden soil in 2 1/2 to 3 feet rows, 3 to 6 inches apart, eye down, cover 1 inch. 1 lb. will plant 75 feet, 1 bu. to the acre (60 lbs.) Do not brush against Bean foliage when wet.

FORDHOOK BUSH. 75 days. Outstanding Bush Lima for home or market, producing a very heavy crop with large, fat pods in clusters of from 5 to 8, and contains 3 to 5 thick, meaty, plump beans of excellent flavor. The sturdy, vigorous plants grow 24 to 30 in. high, spread out nearly 2 ft. and stand up well against wind and rain. They begin to bear early and continue to produce for a long time. Because of its earliness, the large size of the Bean, and long bearing season this strain is most popular, and it is especially appreciated in sections where the Summers are comparatively short. Fordhook always outsells other Bush Limas.

Prepaid: Pkt. 10c., 1/4 lb. 15c., 1/2 lb. 25c., lb. 45c., 2 lbs. 85c.

Not prepaid: 8 lbs. \$2.08, 15 lbs. \$3.30, 60 lbs. (bu.) \$12.00, 100 lbs. \$20.00

TABLE BEETS

Beets should be sown early in the Spring, as soon as the ground can be worked. Successive plantings may be made till the end of July. Beets thrive best in light, loose, deeply worked soil that has been enriched for a previous crop. Smooth roots cannot be grown if fresh manure is used.

PRICE'S EARLY WONDER. Most popular early bunching Beet. To satisfy critical growers who demand an ideal in shape, color and season, is quite a difficult matter. Ideals vary considerably, but we have pleased a very critical trade with our stock of Early Wonder Beet. The shape is a flattened globe, flesh tender, sweet, and attractive, deep red with very indistinct zones— particularly the light zones so undesirable in many stocks; tops small and slender. In season it is about 55 days from seeding to market stage. *Prepaid:* Pkt. 10c., oz. 20c., ¼ lb. 45c., ½ lb. 80c., lb. \$1.60 *Not prepaid:* 5 lbs. \$7.50, 10 lbs. \$15.00, 25 lbs. \$36.25

CABBAGE

One ounce will produce about 3,000 plants, 4 ozs. will produce enough for an acre.

Our strains are the very best to be had, selected from specimen heads in well rogued fields. Sow seeds of the early varieties in February in hotbeds and transplant the latter part of April or early in May to open ground, or an

early sowing in open ground can be made as soon as weather will permit. Set the plants in rows 3 feet apart and 12 to 18 inches apart in the row. The second early varieties sow in April and transplant in May; late varieties, sow in May and transplant in July, setting plants in rows 3 feet apart and 2 feet in rows. Never plant Cabbage in the same location two years in succession.

Early and Medium Early Varieties

Golden Acre. The earliest Cabbage. Matures a week ahead of Copenhagen Market which it resembles in other respects. The heads are small to medium size, as round as a ball, and very firm. The plant is of dwarf, compact growth, with but few leaves, permitting the plants to be set closely.

Pkt. 10c., oz. 70c., ¼ lb. \$1.90, lb. \$6.00

COPENHAGEN MARKET. (The Best Strain Obtainable). A wonderful Copenhagen Market as it follows the Golden Acre by about 10 days but is all of 20% larger. It is practically its equal in uniformity and characteristics but does not mature entirely at one time as the Golden Acre. If both were planted on the same date, then by the time the Golden Acre offers 80% to 90% marketable heads, the Improved Copenhagen will have 10% of the heads hard enough to market. In another week 50% more will have reached the marketable state. Pkt. 10c., oz. 70c., ¼ lb. \$1.90, lb. \$6.00

Glorious of Enkhuizen. Heads large in size, round, solid, uniform in shape and maturity, of very good quality. The heads will range from 6 to 7 lbs. in weight. This variety is popular for market and home use. One of the most desirable varieties for kraut. We offer a very fine strain of this Cabbage—none better. Pkt. 10c., oz. 70c., ¼ lb. \$1.90, lb. \$6.00

Yellows-Resistant

Yellows resistant varieties are the only kinds to grow where ground is badly infected with yellows. In many sections where there is slight yellows infection the ordinary varieties can be grown, but the resistant kinds usually do much better.

Golden Acre. A yellows-resistant strain of Golden Acre. Valuable new addition to the list of early round-head varieties. Produces heads ready for cutting 12 days earlier than Marion Market. Pkt. 10c., oz. 75c., ¼ lb. \$2.00, lb. \$7.00

Copenhagen Market. Round heads resembling Copenhagen Market regular strain, but larger and later. Pkt. 10c., oz. 70c., ¼ lb. \$1.90, lb. \$6.00

Penn State Ballhead. Originated at the Pennsylvania State College and is a favorite in many Cabbage growing sections. It is a short stem variety. The heads of medium size and slightly flattened but very hard and an attractive, bright green color. Produces a large tonnage and keeps well in storage. Pkt. 10c., oz. 70c., ¼ lb. \$1.90, lb. \$6.00

Marion Market. Resembles Copenhagen but matures about 6 days later than our Special Strain and makes a much larger plant. The heads are almost round and very solid, weighing 5 to 6 lbs. each. Favorite early variety for market or home use on yellows-infested land. Pkt. 10c., oz. 70c., ¼ lb. \$1.90, lb. \$6.00

Wisconsin Hollander. Selected from the famous Danish Ballhead and requires about the same time to come to maturity. Heads are large, round, flattened on top but quite deep; weigh 5 to 7 lbs. Resistant to "yellows." Pkt. 10c., oz. 70c., ¼ lb. \$1.90, lb. \$6.00

SAVOY CABBAGE

SAVOY, LONG ISLAND (STRAIN). This is the finest stock of Savoy Cabbage. Plants uniform, short stemmed and compact. The heads are good sized, firm, round and completely blistered or "savoyed" all through the head. It matures earlier and more evenly than any stock we have ever seen. This is the same type as the fine Savoy Cabbage produced by Long Island growers. Pkt. 10c., oz. 70c., ¼ lb. \$1.90, lb. \$6.00

Savoy, Chieftain (All-America Award, 1938). 88 days. Earlier than standard market varieties of Savoy. Plants medium size, short-stemmed, and compact. Leaves broad, rounded, closely and uniformly savoyed, dark olive green in color. Heads medium large, drumhead type, thick, flat, rounded on top, flat at base, firm and well folded, with cap leaves well overlapped; stands a long time without bursting. Not resistant to fusarium yellows. Pkt. 10c., oz. 70c., ¼ lb. \$1.90, lb. \$6.00

RED CABBAGE

Mammoth Red Rock (The Largest Red). This is the largest of the red varieties. The seed we offer will produce large, solid heads of dark red color. This is a very reliable, sure heading, high yielding, strain and will produce a large tonnage under normal conditions. Pkt. 10c., oz. 50c., ¼ lb. \$1.50, lb. \$5.00

Late or Main Crop Varieties

Danish Ball Head or Hollander. Most widely used and best type of late Cabbage; desirable for kraut, for storage and for shipping. Plant fairly large, sturdy, with short stem; outer leaves medium. Heads deep round, very hard; interior decidedly compact, leaves composing head smooth and closely arranged. Texture tender, crisp; flavor good; ideal for high quality kraut. Pkt. 10c., oz. 70c., ¼ lb. \$1.90, lb. \$6.00

Trucker's Favorite (Special). An unusually fine strain of this very hardy, sure-heading, solid Cabbage. Resists cold and dry weather, and is one of the best for keeping till late Spring. Remarkably uniform, medium-sized, very hard, round heads on short stems. Fine shipper. Pkt. 10c., oz. 75c., ¼ lb. \$2.00, lb. \$7.00

Price's Autumn King. Has become very popular during the last few years, and we consider it one of the best keeping varieties ever originated. Heads are round, larger, and earlier than Danish Ballhead, heavy and extremely hard. Pkt. 10c., oz. 70c., ¼ lb. \$1.90, lb. \$6.00

Strains of Cabbage

Bugner. This is the most popular of all the green types of Cabbage for market, home garden, kraut and storage. It is one of the heaviest for size of head, being firm, tender and excellent quality. 8 in. round, flattened slightly, deep through, 7 in., weighing 10 lbs. or more, outer leaves deep purplish green with a tight folded leaf covering the head. Known as a secondary resistant type, will succumb to yellows when the soil goes above 90 degrees of temperature. Seed must be first generation from stock selected each year from badly infected fields if resistance is to be maintained. Ours is both first generation and 1-yr.-old tested seed. Pkt. 10c., oz. 80c., ¼ lb. \$2.50, lb. \$8.00

CAULIFLOWER

"NO BETTER [SEED CAN] BE BOUGHT AT ANY PRICE"

For an early crop, start the seed indoors or under glass in late February and set plants into the garden when soil has become warm. For a main or Fall crop, sow the seed in a specially prepared seed bed or coldframe during June and set plants out in early July. It takes about 30 to 40 days for the plants to grow large enough for setting into the field. 1 pkt. of seed will produce about 150 plants, 1 oz., 4000 plants; 2 ozs. are required to produce enough plants for one acre. Days to maturity are from the time the plants are set out in the garden.

Super Snowball or Special Snowball. The finest, earliest, most profitable strain. With good soil and proper care, Super Snowball can be harvested and out of the way before ordinary varieties are ready to cut. The heads are large and the generous leaves curl over the head to give protection from the sun. This is the originator's strain.

Pkt. 25c., 1/2 oz. \$2.25, oz. \$4.00, 1/4 lb. \$14.00, lb. \$50.00

SNOWDRIFT (WHITE MOUNTAIN). Heads 8 1/2 in. dia., weight 2 lbs. or more; firm, compact, snowy white, fine textured, curd free from leaflets, good quality. Plants: Slightly larger than Snowball, long, large, upright leaves, giving good coverage, medium green. A leading variety today. It excels all Snowball and Erfurt Cauliflowers for vigor and freedom from disease and produces first-grade No. 1 heads, even under adverse growing conditions when most other varieties cut largely second-grade heads.

Pkt. 25c., 1/2 oz. \$2.25, oz. \$4.00, 1/4 lb. \$14.00, lb. \$50.00

Snowball, Price's Pedigree. A very fine improved strain of the true Snowball type. The plant is dwarf and compact and the heads are large, solid, snow white, and with no protruding leaves when well grown under favorable conditions.

Pkt. 25c., 1/2 oz. \$2.00, oz. \$3.50, 1/4 lb. \$12.00, lb. \$45.00

Cauliflower, Snowdrift

CHINESE CABBAGE

Resembles Cos Lettuce. May be served like Lettuce or Cole Slaw; when boiled it is more palatable than ordinary Cabbage.

Chihili. Long, pointed, extra firm, solid heads, pure white inside and of the finest flavor. The leaves are broad, smooth, and fringed at the edge. When fully matured, heads often measure 18 in. tall and 3 1/2 to 4 in. thick. Very reliable header, but do not sow too early as plants will "bolt" during hot weather and will not form heads. Sow seeds about 3 months before your first expected frost.

Pkt. 10c., oz. 45c., 1/4 lb. \$1.20, lb. \$4.00

CORN SALAD

Seed of this splendid little salad plant should be sown in the early Spring in rows about 15 inches apart and if given high cultivation the crop will be ready in about six weeks. Large Seeded. Called also Lambs' Lettuce and Fetticus. This is the variety with large, rounded leaves, dark green in color.

CARROTS

Sow seed early in the Spring in rows 12 to 30 inches apart. Cover seed with $\frac{1}{2}$ to 1 inch of soil and press gently. Thin plants to stand 2 to 6 inches apart. For a continuous supply sowings should be made every two weeks up to the early part of July. For nice, tender Carrot in the Fall or for Winter storing, the later sowings are advisable. Use a packet of seed to 25 feet of row, 1 oz. to 100 feet, 3 to 4 lbs. to the acre.

PRICE'S ALBANY MARKET. A fine Carrot of the bunching class. Longer than Danver's Half Long but differs from the tapering pointed roots of most Carrots of that length, in that it is more stump rooted. Its color is deep orange, both exterior and interior, and runs close to the stem. The core is equally deep orange and small. Its fine bunching tops and smooth, attractive, uniform roots makes this variety ideal for local markets or for shipping.

Pkt. 10c., oz. 35c., $\frac{1}{4}$ lb. 90c., lb. \$3.25

Price's Danvers Half-Long. Well-known favorite Carrot on account of its great productiveness and adaptability to all soils and sections. Commercial crops have yielded 25 to 30 tons per acre. Roots are half-long, almost cylindrical, and under ordinary culture grow 6 to 7 in. long and $1\frac{3}{4}$ in. thick at shoulder, tapering gradually towards the stump end. If grown in deeply prepared soil, roots will measure 7 to $7\frac{1}{2}$ in. long and 2 to $2\frac{1}{2}$ in. at the shoulder. Skin is rich, deep orange-red; flesh is bright orange, fine-grained, sweet and tender. Much more easily harvested than the long types, and an excellent variety for home and market, shipping or storing for Winter use.

Pkt. 10c., oz. 35c., $\frac{1}{4}$ lb. 80c., lb. \$3.00

Bagley Danvers. An excellent, heavily productive sort for market garden and shipping. Roots deep orange, tapered, stump-rooted. Flesh deep orange, tender and of good quality. Similar to Danvers Half Long, but having broader shoulder and longer root.

MARKETER. (1942 All-America Selection). Outstanding characteristics of this new variety are its earliness, its trim shape and rich deep green color which is carried right down to the blossom end of the fruits. The vines are very prolific and have shown less damage from mosaic than standard varieties grown in close proximity, possibly due to their undoubtedly vigorous habit of growth. An interesting feature is the larger than usual proportion of female blossoms which contributes both to earliness and to yield. The fruits are not quite so long as some of the slicing varieties commonly grown, and to most home gardeners this will be an attraction since one of these handy sized Marketer fruits is more likely to be completely used up at a time. From the market grower's point of view, its earliness, uniformity of size and heavy yield will be of importance in addition to the appeal it will make to the buyer's eye. The Blue Ribbon award to Marketer is a new departure in the All-America Selections, its purpose being to indicate the highest ranking in the trials, regardless of the type of medal awarded. This is an Asgrow creation.

FOR THE CONTROL OF THE EUROPEAN CORN BORER
We recommend "Black Leaf" Dual-Fixed Nicotine Dust. Apply at full strength using a hand duster. Dust the growing whorls of the main stalks and each tiller and each of the developing ears when present. These are the points attacked by the young borers, hence require the protection afforded by the Dust. Timing is important—start as soon as the first eggs hatch, and repeat applications at 5-day intervals for about two weeks, or as long as required. Hatching usually starts by the middle of June.

STANLEY'S CROW REPELLENT
Stanley's Crow Repellent is a most effective treatment for Corn to prevent crows and other birds from pulling the seed. We have found that crows and other birds will not bother Corn which has been treated. Don't risk using cheap substitutes.

Economical Stanley's costs as little as 11c. per acre to use
It is non-poisonous, easy to apply and when properly used will not injure seed of any kind and will not clog any planter. Directions for treating seed are printed on each can.

LETTUCE

To grow head Lettuce early, sow the seed in February or March in boxes, flats or in hotbeds in rows. When an inch high, transplant to coldframes. From there set out in the garden as soon as the soil is warm, placing the plants 5 to 7 inches apart in rows while the rows should be 12 to 18 inches apart. Where there is no hotbed, sow seed outside when ground is warm and transplant. For looseleaf or curly-leaved sorts, sow the seed either broadcast or in rows; make sowings every couple of weeks for Lettuce all Summer, and cut as it comes. By sowing in rows the plants can be cultivated. Sow seed the last of August and in September to be transplanted to the coldframe in October. One ounce will sow 300 feet of row, 4 to 5 lbs. for an acre.

ALL OUR SEEDS ARE GROWN FOR US BY THE MOST COMPETENT GROWERS, AND THE STRAINS WITHOUT EXCEPTION, ARE OF THE HIGHEST PERFECTION

RADISHES

Radishes must grow quickly to be good, especially the small early sorts. The soil should therefore be thoroughly prepared. Start to sow right after frost is gone, at intervals of 10 days or so to insure a constant supply. Thin to 24 plants to the foot. If crowded, they run to leaves without making roots. Many gardeners sow the early sorts in the rows of slow-growing crops. The Summer and Winter varieties should be thinned to six to the foot; Winter varieties should not be sown until August. One ounce will sow 100 feet of row. 8 lbs. will sow an acre in drill, 12 lbs. broadcast. Radish Seed is strictly of the finest grade, being grown from carefully selected and transplanted roots.

PRICE'S SCARLET GLOBE (Special Strain). 21 days. Globe shape, exceptionally fine, bright scarlet color. This stock starts fast and bulbs 2 to 3 days earlier than other stocks that we know of. Tops are medium. We consider this an outstanding strain of Scarlet Globe. Proven seed stock produced each year from carefully selected and transplanted roots is the basis of our field plantings of the principal varieties. Northern grown Radish leads in quality and our stocks, bred for the critical market garden trade and reproduced in well isolated fields, are second to none. Screened seed.

Tomato, Valiant

RUTGERS (Certified). Early midseason sort developed by the New Jersey Agricultural Experiment Station. Grows a large plant with plenty of foliage to protect the fruit from sunscald. Too much fertilizer may produce excessive foliage and late fruiting. The fruits are medium to large, shaped like Marglobe but flatter at the stem end. Seed cavity small. Color a fine scarlet which extends clear through. Pkt. 10c., oz. 60c., ¼ lb. \$1.75, lb. \$6.00

Chalk's Jewell. Vigorous and productive; second early variety. Pkt. 10c., oz. 45c., ¼ lb. \$1.30, lb. \$4.00

Earliana. Particularly valuable for early market. Our strain is definitely superior in earliness and quality. Fruits medium size; flattened globe shape; scarlet-red; firm and smooth. Improved strain. Pkt. 10c., oz. 60c., ¼ lb. \$1.75, lb. \$6.00

Stokesdale. The largest medium early red Tomato. Very solid, of fine quality and very prolific. The fruit is of excellent deep color, coloring well all over. In season it is medium early ripening about with Bonny Best. Because of its good quality and very heavy yield we believe this Tomato has a place for market, shipping and canning. Pkt. 10c., oz. 50c., ¼ lb. \$1.50, lb. \$5.00

Pritchard (Scarlet Topper). Early. Very promising heavily productive, wilt-resistant introduction of superior merit for home and market garden, shipping and canning. Fruits large, globe-shaped, scarlet and well colored about the stem end; flesh firm and of fine quality. Pkt. 10c., oz. 50c., ¼ lb. \$1.50, lb. \$5.00

Scarlet Dawn. One of the best early red Tomatoes. About a week later than Earliana, but is larger, heavier yielding and of sweeter flavor. Fruits are a beautiful scarlet, globe-shaped and full of deep, luscious, meaty, fine-grained flesh. Pkt. 10c., oz. 60c., ¼ lb. \$1.75, lb. \$6.00

John Baer. Vigorous and productive; second early variety, very similar in every respect to Bonny Best. Especially fine shipping variety. Pkt. 10c., oz. 50c., ¼ lb. \$1.50, lb. \$5.00

Bonny Best (Certified). An excellent extra-early, between Earliana and Chalk's Jewell. Fruits are medium-sized, bright scarlet, exceedingly smooth, round shape, and ripen evenly. Pkt. 10c., oz. 50c., ¼ lb. \$1.50, lb. \$5.00

CARDINAL. A recent Asgrow introduction bred to provide an earlier Improved Stone type in the main crop class. Strong dark green, very prolific plants which retain their foliage through a long bearing season. Large, handsome, semi-globe fruits of rich scarlet with unusually deep interior color; smooth, thick-walled and solid. Pkt. 10c., oz. 60c., ¼ lb. \$1.75, lb. \$6.00

Tomato Plants

We make a specialty of the finest sturdy, true to name plants of the most popular varieties of Tomatoes.

TOMATOES

Sow the seed in February or March in a hotbed, greenhouse or in shallow boxes in the house. When plants are about 2 inches high, transplant to 4 inches apart. Transplant in the open ground after all danger of frost is past, 3 to 4 feet apart each way. Cultivate frequently. When plant has reached a height of 5 feet, cut off the top. When three or four clusters of fruit have formed and some of the fruit is as large as a silver dollar, prune the leaves at the base one-half. This hastens ripening. Once a month apply sheep manure around each plant. One ounce will produce 2,000 to 3,000 plants, 2 to 3 ounces for an acre; 35 to 40 plants to 100 feet of row.

Victor (The New Extra Early Tomato). The vine is a sturdy determinate type, that can be planted close together (2x3 ft.) and thus have more early fruit per acre. If you want extra early Tomatoes, be sure to grow Victor. Victor has large clusters of beautiful Tomatoes ripening all at once. Pkt. 10c., oz. 60c., ¼ lb. \$1.75, lb. \$6.00

NEW VALIANT. An extra-large, solid, round, red Tomato which, surprisingly enough, matures *only* three days later than Earliana. A very profitable early market variety and specially recommended for heavier soils which will develop and maintain ample vine-growth. Try this for your early crop. Pkt. 10c., oz. 60c., ¼ lb. \$1.75, lb. \$6.00

Master Marglobe (Certified). Early midseason variety, similar to the usual Marglobe but more uniform, slightly earlier, very solid, and very free from blossom end scar and flats. Pkt. 10c., oz. 50c., ¼ lb. \$1.50, lb. \$5.00

Dwarf Stone. Dwarf, close-jointed, vigorous and productive. Late-maturing with large, smooth, bright red, solid fruits in clusters. Pkt. 10c., oz. 60c., ¼ lb. \$1.75, lb. \$6.00

Selected Stone. Productive late red variety. Fruits large, solid, flattened-round, smooth, uniform. Large, strong vines. Pkt. 10c., oz. 50c., ¼ lb. \$1.50, lb. \$5.00

Matchless. For main planting; large, smooth, solid bright red fruits. Pkt. 10c., oz. 40c., ¼ lb. \$1.25, lb. \$4.00

Greater Baltimore. A main crop variety as a fruiter, slightly more reliable than Stone because, although it is about the same size, it is earlier and more productive. Pkt. 10c., oz. 50c., ¼ lb. \$1.50, lb. \$5.00

Beauty. Large, late, pink, very smooth. Pkt. 10c., oz. 50c., ¼ lb. \$1.50, lb. \$5.00

Green Mountain Potatoes

Maine Grown SEED POTATOES

(CERTIFIED SEED)

Potatoes are a most important crop to every gardener and care should be taken to plant strong, healthy, disease-free stock. A rich, sandy loam containing plenty of humus will give the best crops. Cut the tubers to 1 or 2 eyes. Plant in rows 3 feet apart, and drop 15 to 18 inches apart in row. Cover the tubers or divisions 4 inches deep. From 10 to 12 bushels of Potatoes are needed to plant one acre.

Red Bliss. To those who prefer a Potato with a pink skin and white flesh, or those who grow for markets where this color is in demand, we recommend Red Bliss. It is one of the very earliest, nearly round, peels without waste and a fine yielder. It is a sure and uniform cropper, a strong grower, is of good size, cooks white and mealy and measures up to every requirement of a first-class first early Potato. Its productiveness and fine quality commend it.

Irish Cobbler. One of the best extra early varieties, with nearly round tubers having slightly indented, well-developed eyes when full size. The skin is thin, smooth, and of a yellowish white color. The flesh is pure white and exhibits remarkable cooking qualities. It is an extremely heavy yielder of choicest quality.

Chippewa. An attractive Potato, smooth, slightly flattened oval with shallow eyes, similar in appearance to Green Mountain, but earlier. Cooks very white and is good quality. Many growers are increasing their acreage on this, for it is profitable and sells readily after the main digging of cobbles.

Katahdin. This new Potato has become well established as a standard late or main crop variety. It matures a little later than Green Mountain but before the Rural Russet. The tubers are white skinned, handsome in appearance and have shallow eyes. This variety has been outstanding in the large percentage of good marketable Potatoes it produces. Does best on light upland soil or muck land.

Green Mountain. The most popular Potato on earth. Ideal for main crop. A dependable Winter keeper. An excellent baking variety. A reliable medium late Potato that is so popular in some sections it has superseded all other main crop varieties. It seems to thrive in all soils and in all localities, making heavy, healthy vines and yielding big crops of large, smooth, white skinned tubers of handsome, flatish oval form. It cooks white, dry and mealy, and well, and is not liable to scab or decay.

Russet. Considered the best late Potato today and as near blightproof as a Potato can be. The tubers are round to oblong and of good size. Flesh is pure white and the skin has a rough, russet appearance.

FIELD and ENSILAGE CORN

Cornell No. 29-3 Hybrid Dent. Best Hybrid Field Corn for New York and New England. This variety was developed for ensilage on high elevations and husking use on lower elevations. It is from inbreds of Cornell 11, Bloody Butcher, Onondaga White Cap, and Luce's Favorite. The kernels lack uniformity of color and range from white to deep red and ripens in 110 days. Grows tall and somewhat more leafy; matures as early as Cornell No. 11. Has a stronger root system than the open pollinated varieties and therefore less trouble with lodging. Can be used both for ensilage and husking. This variety has become popular throughout New York State and vicinity during the past few years.

New York State Certified Seed

Lancaster Sure Crop. About 110 days. Stalks 8 to 12 ft. high. Ears have broad yellow dent kernels on a red cob.

Cornell No. 11. Matures 100 days. Best for New York State.

Improved Leaming. Yellow Dent. An early, long eared Corn, averaging about 10 in. in length with 18 to 20 rows of deep yellow kernels. A good Corn for silo and extensively grown for that purpose by stock feeders everywhere. Matures in 100-110 days.

Longfellow. For many years a favorite yellow flint variety in New York State. The ears reach a length of 12 to 14 in. and have eight rows. The stalks are taller than Canada and occasionally bear two ears.

Sanford White Flint. An 8-rowed white Flint variety, used to a considerable extent. Resembles Early Canada in all except color.

Early Eight Row Canada. Matures in about 85 days. Ears are medium length with eight rows. Stalks grow 7 to 8 ft. high. A yellow Flint Corn.

AGRICULTURAL SEEDS

Cornell Pasture Mixture (Utility). The seed bed should be prepared by plowing and harrowing, and the seed evenly distributed at the rate of 25 lbs. per acre. Cover the seed not over 1/4 in. deep. For best results sow as early as possible in April. Seeding may be done in May, but Summer and Fall seedings are not recommended. Mow the weeds, if necessary and a light grazing may be allowed in August and September. The mixture contains Kentucky Blue Grass, Canada Blue Grass, Timothy, Mammoth Red Clover, Alsike Clover, Ladino Clover and Red Top.

Timothy (99.60 Pure). As a crop for hay Timothy is probably unsurpassed by any other grass.

Grimm Alfalfa Clover (The Genuine Certified). Has different root system, more hardy than other strains of Alfalfa and can be grown on shallower soil. Sealed and certified bags.

Medium Red (Domestic Grown). This is the common Red Clover, so extensively grown. It is a biennial in most places, living but two years if allowed to seed. It is usually sown early in the Spring on Winter Wheat or with Oats or Barley, but can be sown in July or August. This seed is American grown and the highest grade.

Alsike. Grows well on low, wet land where Red Clover does not thrive. It is a perennial and will last for a good many years, either for hay or in pasture. It makes fine hay of high feeding value and is very valuable in pastures. Seed of highest quality.

Ladino. This type of Clover is used in pasture mixtures with success and is harder than Alfalfa. Can be used as a green feed for poultry. Sow 8 lbs. per acre.

Red Top Fancy. It is a perennial grass with a creeping habit of growth; leaf blades narrow. Red Top is a remarkable grass, accommodating itself to a variety of soils and conditions. It grows well on wet land. It is strongly drought-resistant and flourishes on soils so very poor in lime that most other grasses fail.

Dwarf Essex Rape. A forage plant of great merit. Valuable feed for cattle, sheep and hogs. Sow 10 to 12 lbs. per acre.

Golden Millet. Produces a very fine quality hay and makes a large seed head. One bushel will sow one acre.

Soy Beans, Black Wilson. Valuable for improving the soil. Also good for fodder. Sow in drills 3 ft. apart. Sow 1 to 2 bushels per acre. Bushel (60 lbs.)

Sudan Grass. The most wonderful annual grass ever introduced. Sow 20 lbs. to acre.

Winter Vetch. For forage and fertilizing purposes.

Peas, Canadian Field. Usually sown with Oats. Used both as a green feed and fertilizer.

Seed Oats. Selected varieties of supreme quality.

DON'T WASTE GARDEN RUBBISH— CONSERVE IT BY USING ADCO

Garden wastes, including leaves and grass clippings are too valuable to burn or otherwise destroy. Convert them easily into rich, organic manure by employing **ADCO**, a powder which when mixed with vegetable waste and kept moist gradually converts the material into real manure free from weed seeds. The method of using **ADCO** is simple. Anybody can use it. Spread your farm and garden rubbish (either in a heap on top of the ground, in a large crate, or in a shallow pit) and every time it becomes 6 inches higher, wet it down, sprinkle with **ADCO**, and tramp or tamp it down. Repeat these steps until all the rubbish is used, and at least once, at the end of a month, turn it over. In three months or so you will be rewarded with a fine lot of rich, clean, organic fertilizer.

Adco. The addition of Adco to the compost pile or to other vegetable refuse, grass clippings, etc. at the rate of 2 lbs. to each wheelbarrow load of refuse, will produce a clean, odorless manure within 3 or 4 months. 25 lbs. \$2.00, 7½ lbs. \$1.00

PEAT MOSS

Add Humus to Your Lawn and Garden

Peat Moss has proved itself to be invaluable and is widely used as a humus adding material for lawns and gardens. It loosens hard soil and makes sandy soil hold moisture better. Use with fertilizer in place of stable manure.

It is actually partially decayed moss and aquatic plants, is light brown color, *entirely odorless*, clean and easy to handle and is *free from weed seeds*.

Peat Moss is especially good when used as a mulch, either to hold moisture in the Summer or to protect plants from Winter injury. As it contains no weeds, it makes an unexcelled lawn mulch. *Ideal for Roses.*
